

## Conf Call Objectives

### One minute overview

- Team out collecting monitoring data from more houses. Getting more hapsite data today.
- Making good progress.
- Community outreach ongoing.
- City/State are not in comm over holiday weekend. We expect to comm Tuesday at latest depending on decisions on this call.
- We have been advising the most affected homes to ventilate, helped a few homes set up fans in basement, and change sleeping locations in some instances. The highest concentration home needs follow up to ensure their doing this.
- We start air sampling tomorrow, GW Tuesday.

Review current air monitoring data levels detected.

Discuss short term human health implications of estimated readings.

Determine what actions need to happen, if any, to protect human health at affected residences/commercial buildings while we await solid data from labs, which will likely not be available until the end of the week.

NOT a technical sessions – suggest we set up a separate conversation for this if needed.

NOT a discussion to design a sampling plan, STARTS are working on this and we will begin tomorrow. We can hold a separate conversation on this later if needed.
